

I utterly oppose the reallocation of existing non-SSB frequencies for the following reasons: 1) Existing SSB allocations are adequate as long as reasonable order and behavior are followed; 2) Non-SSB modes encourage experimentation; 3) Morse code(CW) operation is a mode of choice for developing ("3rd world") countries due to the simplicity of CW equipment compared to that required for SSB; and 4) Young operators in this country and elsewhere frequently must use such simple equipment due to the ease of construction and/or relatively lower costs of equipment used for Morse code(CW) operation.
